5.	Farm Expenditures on Fertilizer	43
6.	Appendix: Addresses of Data Sources	47

INTRODUCTION

There is a need for a better understanding of the method of collection and of the assumptions behind different data series regarding fertilizer distribution and use. This paper presents the most current statistics available, describing the sources and identifying possible discrepancies.

Agriculture Canada does not conduct any surveys of its own and therefore cannot assume responsibility for the actual figures themselves. Those contributing to this paper, however, do represent the most reliable sources currently available. Any questions concerning individual tables should be addressed to the organization or government agency responsible. (The relevant addresses and phone numbers are listed in the appendix).

1. CONSUMPTION OF FERTILIZER BY FERTILIZER TYPE

The most reliable sources on fertilizer consumption are regional fertilizer associations. These associations conduct surveys of all the principal companies engaged in fertilizer retailing within a particular province. For Western Canada, statistics are also obtained on shipments from the basic manufacturers to estimate the volume handled by those not affiliated with the retail companies surveyed. It is estimated that over 95 percent of all fertilizer sales are captured by these regional association surveys.

The fertilizer consumption figures represent the volume sold by retailers within a particular province. This may not correspond exactly to all on-farm consumption in that province, as there is some inter-provincial and international movement of fertilizer between retailer and farm. It may be assumed, however, that any net movement is not significant in relation to the overall provincial total.

The fertilizer consumption statistics for all provinces, exclusive of the Atlantic region, are listed according to the materials used in the preparation of the fertilizer. There are no data which indicate what proportion of this material was utilized in the granular form and what proportion was utilized in the preparation of liquid fertilizers.

In Western Canada, the Western Canada Fertilizer Association (WCFA) figures for potash consumption were significantly less than those reported to have been shipped from potash mines. It is assumed that this discrepancy is due to a number of individual fertilizer dealers ordering their potash

directly from the mines, rather than through their particular company (only the retail companies submit statistics to WCFA, not individual dealers). For the purposes of the consumption tables, potash use will be assumed to be mine shipments reported by the Potash and Phosphate Institute rather than that given by WCFA. The figure for "muriate of potash" is derived by subtracting the potash contained in "other mixtures" from the total potash shipped.

In western Canada, "Other Nitrogen" includes specialty nitrogeneous fertilizers plus mixtures which have nitrogen as their principal component. Similarly, "Other Phosphate" and "Other Potash" include mixtures which have these nutrients as their principal component. It is not possible to determime the phosphate and potash content of the "Other Nitrogen" mixtures from the information available; however, the total N, P and K content for all mixtures is known. In Tables 2.9 to 2.13 inclusive, the nitrogen content of all mixtures (regardless of how it is classified) is included in "Other Nitrogen", the total phosphate content is indicated in "Other Phosphate" and the total potash content in "Other Potash".

Table 1.1 Total Provincial Consumption of Fertilizer, Atlantic Provinces(1)
Year Ended June 30, 1986

	Fertilizer Material	Nutrient Content		
		Nitrogen (N)	Phosphate (P_2O_5)	Potash (K_2O)
	(All figures in metric tonnes)			
New Brunswick	47,928	6,419	6,063	6,857
Nova Scotia	34,375	5,706	4,396	4,978
P.E.I.	59,285	8,617	9,285	9,561
Newfoundland	3,611	415	474	457
Total	145,199	21,157	20,218	21,853

(1) The statistics for fertilizer consumption in the Atlantic region are not given by fertilizer material but by the NPK formulations in which it was sold to the farmers. The formulations are too numerous to list here.

Table 1.2 Fertilizer Sold and Nutrient Content, Quebec
Year Ended June 30, 1986

Fertilizer Material	Quantity	Nutrient Content		
		Nitrogen (N)	Phosphate (P_2O_5)	Potash (K_2O)
	(All figures in metric tonnes)			
Nitrogen:				
Urea	84,693	38,959		
Ammonium Sulphate	6,541	1,374		
Ammonium Nitrate	40,366	13,724		
Anhydrous Ammonia	3,233	2,651		
Nitrogen Solutions	21,186	8,064		
Phosphate:				
Mono-ammonium Phosphate	18,620	2,048	9,682	
Diammonium Phosphate	124,834	22,470	57,424	
Single Superphosphate	9,470		1,894	
Triple Superphosphate	17,503		8,051	
Potash:				
Muriate of Potash	146,176			87,706
Potassium Sulphate	1,499			750
Potassium Magnesium Sulphate	26,164			5,756
Other fertilizer materials(1)	19,234	153	101	330
Total	519,519	89,443	77,152	94,542

(1) Includes mainly limestone grit used as "filler".

Table 1.3 Fertilizer Sold and Nutrient Content, Ontario(1)
Year Ended June 30, 1986

Fertilizer Material	Quantity	Nutrient Content		
		Nitrogen (N)	Phosphate (P_2O_5)	Potash (K_2O)
	(All figures in metric tonnes)			
Nitrogen:				
Urea	170,857	78,594		
Ammonium Sulphate	8,000	1,680		
Ammonium Nitrate	95,686	32,530		
Anhydrous Ammonia	44,223	36,263		
Nitrogen Solutions	117,624	32,644		
Phosphate:				
Mono-ammonium Phosphate	99,690	11,801	50,661	
Diammonium Phosphate	144,080	25,934	66,276	
Single Superphosphate	5,779		1,156	
Triple Superphosphate	64,175		29,425	
Potash:				
Muriate of Potash	346,365			210,208
Potassium Sulphate	7,794			3,897
Potassium Magnesium Sulphate	17,903			3,757
Total	1,122,176	219,446	147,518	217,862

(1) These figures may be subject to revision.

Table 1.4 Fertilizer Sold and Nutrient Content, Central Canada(1)
Year Ended June 30, 1986

Fertilizer Material	Quantity	Nutrient Content		
		Nitrogen (N)	Phosphate (P_2O_5)	Potash (K_2O)
	(All figures in metric tonnes)			
Nitrogen:				
Urea	255,550	117,553		
Ammonium Sulphate	14,541	3,054		
Ammonium Nitrate	136,052	46,254		
Anhydrous Ammonia	47,456	38,914		
Nitrogen Solutions	138,810	40,708		
Phosphate:				
Mono-ammonium Phosphate	118,310	13,849	60,343	
Diammonium Phosphate	268,914	48,404	123,700	
Single Superphosphate	15,249		3,050	
Triple Superphosphate	81,678		37,476	
Potash:				
Muriate of Potash	492,541			297,914
Potassium Sulphate	9,293			4,647
Potassium Magnesium Sulphate	44,067			9,513
Other Fertilizer Materials	19,234	153	101	330
Total Central Canada	1,641,695	308,889	224,670	312,404
Total Eastern Canada(2)	1,786,894	330,046	244,888	334,257

(1) Central Canada figures are a summation of Tables 1.2 and 1.3

(2) Eastern Canada includes Atlantic totals from Table 1.1 in addition to those from Central Canada.

Table 1.5 Fertilizer Sold and Nutrient Content, Manitoba
Year Ended June 30, 1986

Fertilizer Material	Quantity	Nutrient Content		
		Nitrogen (N)	Phosphate (P_2O_5)	Potash (K_2O)
	(All figures in metric tonnes)			
Nitrogen:				
Urea	168,735	77,618		
Ammonium Sulphate	10,984	2,307		
Ammonium Nitrate	70,625	24,013		
Anhydrous Ammonia	109,009	89,387		
Nitrogen Solutions	66,563	18,638		
Other Nitrogen(1)	917	327		
Phosphate:				
Mono-ammonium Phosphate	183,224	20,521	95,276	
Diammonium Phosphate	23	4	11	
Ammonium Phosphates, Other	29,867	3,145	9,786	
Other Phosphate(1)	1,374		356	
Potash:				
Muriate of Potash	31,797			19,396
Other fertilizers(2)	357			
Total	673,475	235,960	105,429	19,396

(1) Includes mixes which have more than one nutrient. The nitrogen content listed for "Other Nitrogen" includes the nitrogen contained in (primarily phosphatic) mixes included in "Other Phosphate".

(2) Principally fertilizers containing elemental sulfur.

Potash figures are derived from shipments reported by the Potash and Phosphate Institute

Table 1.6 Fertilizer Sold and Nutrient Content, Saskatchewan
Year Ended June 30, 1986

Fertilizer Material	Quantity	Nutrient Content		
		Nitrogen (N)	Phosphate (P_2O_5)	Potash (K_2O)
	(All figures in metric tonnes)			
Nitrogen:				
Urea	290,412	133,590		
Ammonium Sulphate	33,698	7,076		
Ammonium Nitrate	49,187	16,724		
Anhydrous Ammonia	135,929	111,462		
Nitrogen Solutions	9,207	2,578		
Other Nitrogen(1)	1,692	1,999		
Phosphate:				
Mono-ammonium Phosphate	332,439	37,233	172,868	
Diammonium Phosphate	934	168	430	
Ammonium Phosphates, Other	46,634	6,970	10,941	
Other Phosphate(1)	5,527		1,298	
Potash:				
Muriate of Potash	20,859			12,724
Other fertilizers(2)	133			
Total	926,651	317,800	185,537	12,724

(1) Includes mixes which have more than one nutrient. The nitrogen content listed for "Other Nitrogen" includes the nitrogen contained in (primarily phosphatic) mixes included in "Other Phosphate".

(2) Principally fertilizers containing elemental sulfur.

Other Potash	1,299			399
Other fertilizers	21,918	153	101	330
Total for Western and Central Canada	4,240,768	1,205,094	686,521	379,512
Total for all Canada[2]	4,385,967	1,226,251	706,739	401,365

(1) This table is a summation of Tables 1.4 and 1.9

(2) This row includes figures for the Atlantic provinces from Table 1.1

2. HISTORICAL CONSUMPTION DATA BY NUTRIENT EQUIVALENT

Up to the 1976/77 fertilizer year, data on provincial fertilizer consumption was provided by a Statistics Canada survey of fertilizer retailers and published in "Fertilizer Trade" (Stat. Can. Catalogue No. 46-207). It is not possible to use these statistics to isolate the amount of the different fertilizer feedstocks used in each province, as much of the fertilizer is expressed only in terms of the formulations sold. The Statistics Canada results are useful, however, for estimates of the total nutrient consumption in each province.

After the 1976/77 fertilizer year, the industry associations have been the most reliable sources of information on fertilizer consumption[1]. Generally, their statistics have been expressed in terms of the different materials used and also provide a summary of total nutrient consumption for the province or region.

---

1 Statistics Canada did conduct a retail survey for the 1983/84 fertilizer year and published the results in "Usage of Fertilizer Materials" (Stat. Can. Catalogue No. 46-504).

Table 2.1 Total Fertilizer Materials Used and Nutrient Content, Newfoundland
Year Ended June 30

Year	Fertilizer Material Used	Nutrient Content			
		Nitrogen (N)	Phosphate (P_2O_5)	Potash (K_2O)	All Nutrients (N + P + K)

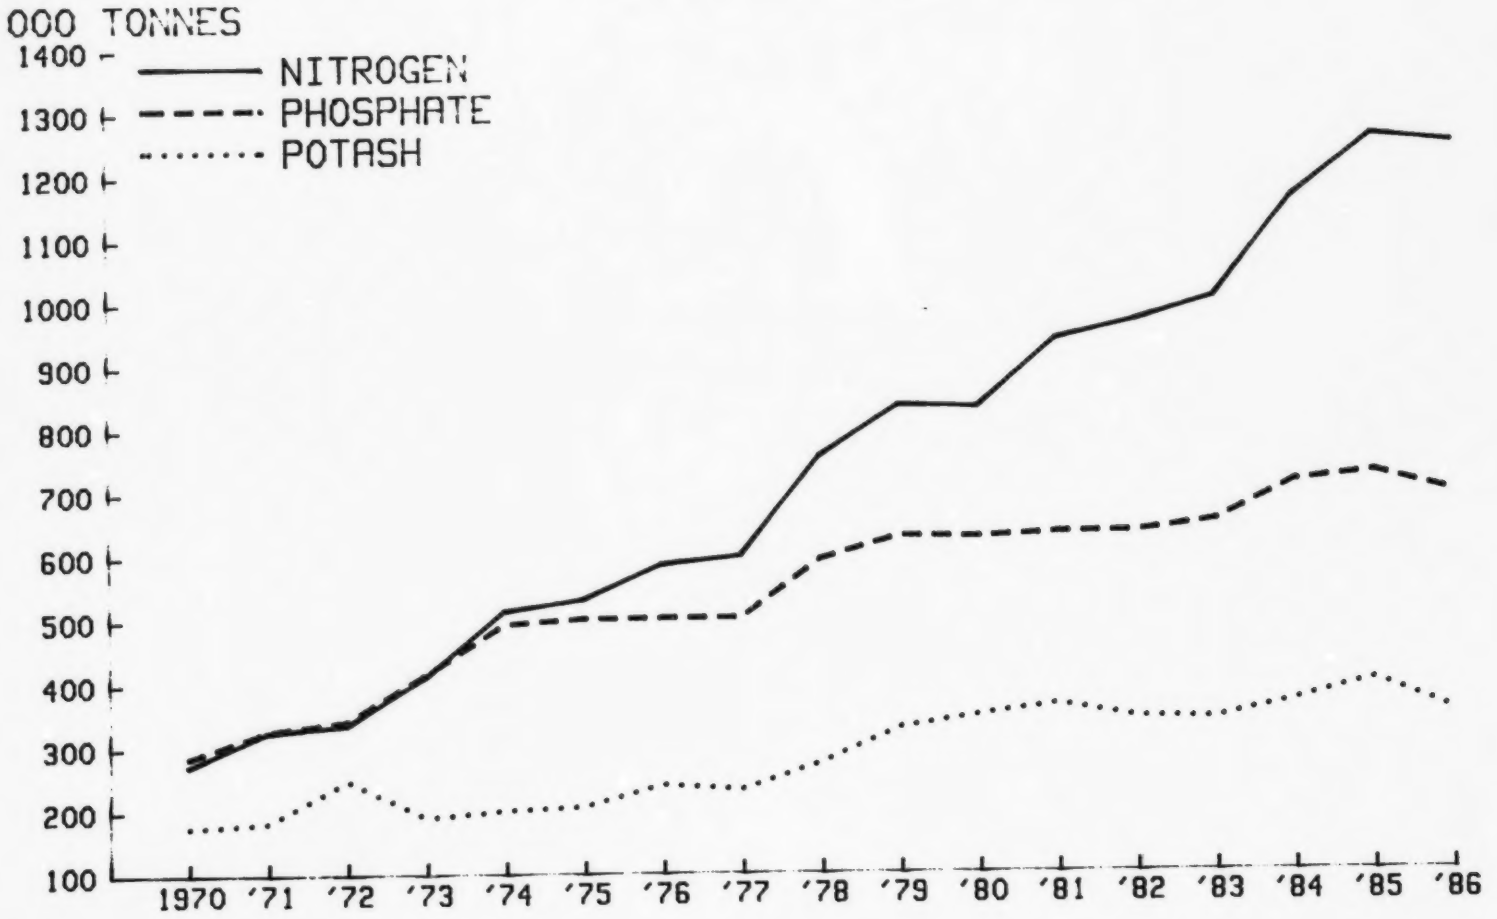

FIGURE 10 FERTLIZER CONSUMPTION, MEASURED AS NUTRIENT EQUIVALENT, ALL CANADA

3. FERTILIZER SHIPMENT DATA

The fertilizer shipment data is derived from information on the province of destination for fertilizer shipments from the following domestic fertilizer manufacturers:

C-I-L Inc.

Cominco Ltd.

Cyanamid Canada Ltd.

Esso Chemical Canada

Nitrochem Inc.

Noranda Mines Ltd.

Simplot Chemical Co.

Sherritt Gordon Mines Ltd.

Western Co-operative Fertilizers Ltd.

Data on potash shipments are provided by the Potash and Phosphate Institute. All shipment information is compiled and presented by the Canadian Fertilizer Information System.

Shipments to different provinces are different from actual consumption, as shipments do not account for fertilizer imported from other countries. Furthermore, fertilizer shipped in a particular fertilizer year is not necessarily consumed in that period. Shipments tend to represent the original provincial destination of fertilizer once it leaves the manufacturer and do not account for fertilizer which is shipped to other provinces or exported after reaching that destination.

4. FERTILIZER TRADE

Fertilizer trade data are compiled by province of entry or exit by Statistics Canada. These data do not represent the province of origin of exports nor the province in which imports were ultimately utilized. They simply reflect the point at which the fertilizer crossed the international border. As very little traded fertilizer is actually transported between Eastern and Western Canada, exports which are observed to have occurred from one region will have originated there and imports entering that region will be consumed there.[1] Trade statistics will therefore be relatively accurate on a regional basis (Table 4.1).

It should be noted that there are some discrepencies between these export figures and those in the shipment data of the previous section. Some of this is due to the fact that not all companies report their exports when submitting shipment information to the Canadian Fertilizer Information System. (Table 3.1). Other discrepancies in export data have been attributed to differences in the fertilizer year in which certain exports were assumed to have taken place. In addition, some of the Statistics Canada trade statistics include urea and ammonium nitrate which are used industrially, while those recorded for the Canadian Fertilizer Information System only include the volume considered to be fertilizer grade.

---

1. The principal exception to this is potash exports shipped out through Thunder Bay, Ont. For the purposes of the following tables, potash which shows the province of export to be Ontario will be assumed to originate in western Canada

Table 4.1 Fertilizer Trade by Region and All Canada
Year Ended June 30, 1986

	Exports			Imports		
	East	West	Total	East	West	Total
	(All figures in metric tonnes of fertilizer material)

5. FARM EXPENDITURES ON FERTILIZER

Farm expenditures on fertilizer are currently estimated employing the National Farm Survey and taxfiler data. Prior to the introduction of National Farm Survey in 1983, the Agricultural Enumerative Survey and the Farm Enumerative Surveys were the chief sources of information. Before these surveys were introduced in the mid-1970's, consumption estimates were based on information from the Agricultural Census with appropriate adjustments for year-to-year variation in consumption.
